A new chatting app built for the expanding community of masternode coins enthusiast. Makeator will bring the community united and organized in just one place. Better UI, Performance and blockchain technology features.

Makeator is a single interface for crypto enthusiast, developers and gamers. Through the chat interface everyone can spend or get paid using our MKTR coins.

Makeator adoption is nearly zero difficulty because of this fast growing community on the masternode coins ecosystem as well as gamers that wants to earn while playing their favorite games. Coin developer or team members can now have the ease to have their community united in our chatting app. As well as users, consumers, experts that offers their services in exchange of chatty coins.

Makeator is here to help and give them an easy way to manage a crypto community on the best/right possible way. A chatting platform that offers a complete tool to make your community well organized and neat.

When developers choosed our chatting platform for their community on the launch of their projects they can easily market their project within their own channel, by spending chatty coins they get a different services on what a newly launched masternode coin needs.

- Advertise through the entire community viewed by all makeator users.
- Use of the masternode one button deploy using their own script through the built-in CLI. The zero knowledge and fastest way to deploy masternodes for your users/investors.
- Use of our own shared-masternode services managed solely by makeator.

Users of makeator platform can get paid through escrow system of makeator by having a deal with the developers/team members on any server they join to become for example a moderator, community manager or what the dev/team has to offer.

With this escrow system user and dev team are both secured wether user completed his job for the dev or vice versa when dev is not satisfied for the services done by the user.

All this features in one platform.

The currently used chatting app by gamers today does not offer the complete tools for a real gamer specially if you are a streamer, using the platform players can stream on the app and get donations straight up to your makeator wallets, and players can do giveaways or any bounty that he offers for his viewers all off that in MKTR coins payment.

A really great experience managing your community backed by a coin and a complete useful features.

- Clean,elegant and robust UI design to easily manage our community.
- Complete built-in packs of bots needed to manage a community.
- Team members/devs best and complete chatting platform for users/investors.
- User's best way to earn and get paid by offering their services, without using multiple chatting apps.
- Makeator offers a masternode one button deploy built within the platform.
- Makeator offers an escrow system for both users/devs or users/users.
- Makeator APP can stake your coins within the platform.
- Hire a dev/mods/admins for your channel and pay using MKTR.

UI

We are inspired by the looks of the current used chatting app by the masternode enthusiasts. But makeator features is not suitable for that UI design so we are rebuilding it with a more robust and complete chatting UI to integrate our features.

BOTS

Automation is what a crypto or gaming community needs, without having to worry about integrating a third party bots. Makeator will be out along with the useful bots.

DEVS CONTROL

Developers or team members that chooses our chatting platform to use as their community handler will get the benefits of using our masternode deployer, in built coin staking feature for their coin or MKTR coin, shared masternode services, coin advertisements and hiring of new members with an escrow payment system.

USERS CONTROL

You have talents or services to offer in the server you are into? This feature is the so called HIRE ME. Within the platform you can offer your services to the developers to be a mod,marketer or community manager and get paid in MKTR coins.

MASTERNODE ONE BUTTON DEPLOY

The platform comes with a CLI on where you can input your existing script to deploy a masternode or use our own script integrated on the system, simply clicking one button and get rewarded.

BUILT IN ESCROW

When devs/team members hires services from users or users offers services to the dev/team members, can securely use the escrow integrated on the platform.
